

The Student Chapter of the American Veterinary Dental Society (or Dental Club) is dedicated to increasing knowledge and awareness of veterinary dentistry. Since dentistry is not a large part of the curriculum here at OSU, one of our goals is to give students access to more information as well as more exposure to dental procedures. We focus on both small and large animals, so everyone can benefit from our club regardless of their career path.

This year we plan to have several wet labs, including a dental extraction lab and a teeth floating lab. Paid members get first priority when signing up for these labs. We also have talks about large animal and small animal dentistry scheduled for this term, so come join us!
